Depending on the neurotoxin type these act to cleave small proteins within the nerve cell which are involved in neurotransmitter release. Antibodies are used in assays which detect cleaved but not uncleaved substrate. An assay for botulinum type B uses the present sequence as a substrate. It is VAMP (vesicle- associated membrane protein) isoform-1, residues 60-94. The VAMP peptide can be attached by a C- or N-terminal cysteine to a solid phase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 37 AA;
                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence was investigated in the search for Botulinum toxin inhibitors (BttxB). Previn compounds which inhibit the enzymatic activit of BttxB and tetanus neurotoxins were isolated. Previns may be used to construct compounds such as buforinins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-NOV-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VAMP2; antibacterial; Botulinum toxin inhibitor; BttxB; previn;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is one of a number of peptide or peptide-like compounds, designated buforins, which inhibit the enzymatic activity of Botulinum toxin B (BttxB) and Tetanus neurotoxins. The buforins are useful for treating Botulinum or tetanus intoxication by administering composition comprising a buforin to the subject prior to the contact wi BttxB or tetanus intoxication. Antibodies specific for buforins are useful for detecting buforins by forming immunocomplexes. The buforins have improved circulatory half-life, solubility, resistance to degradation and interaction with the active site of the toxin
                                                                                                                                                                                                                                          Clostridial neurotoxin substrate; botulinum neurotoxin substrate; FRET

The clostridial (including the Clostridium botulinum) neurotoxin substrate peptides are useful for detecting the presence of clostridial neurotoxins in a sample (e.g. food or an environmental sample). The present amino acid sequence represents a clostridial neurotoxin substrate peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The polynuclectide sequences given in AAC74337 to AAC74386 encode the CC human secreted proteins given in AAB39402 to AAB39451. AAB39452 to CC human secreted proteins are given in the exemplification of the present continuous to them, which are given in the exemplification of the present convention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Example of activities include: cyrostatic; immunosuppressive; noutropic; antinflammatory; antivital; convulsant; antibacterial; antinflammatory; antivicer; curvaturerary; anticonvulsant; antibacterial; antinflammatory; antivicer; curvating or ameliorating a medical condition in e.g. humans, mice, crabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or curvations of dentification. They are also useful as probes for diagnosing cardisorder related to the female reproductive system, particularly breast cand ovarian cancer. They are also useful as probes for diagnosing caponists and antagonists are useful in the diagnosis, treatment and curvations of: (a) cancer; (b) immune disorders; (c) cardiovascular confectious diseases such as viral, bacterial, fungal and parasitic confections. AAC74128 to AAC74336 and AAB39401 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc that expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotides equence which is differentially cc expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc polynucleotides, a method for producing a pharmaceutical composition, a specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more cc polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain made and pharmaceutical composition comprising the one or more cc polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for producing a medicament for treating pain. Note: the sequence data for this patent did not form part of the printed cc producing which is differentially expressed during pain. Note: the specification, which is differentially expressed during pain. Note: for minimal contractive that the printed contractive that the printed contractive that the printed contractive ftp.wipo.int/pub/published_pct_sequences.

The botulinum neurotoxins possess highly specific zinc-endopeptidase activities within their light sub-units. Depending on the neurotoxin type these act to cleave small proteins within the nerve cell which are involved in neurotransmitter release. Antibodies are used in assays which detect cleaved but not uncleaved substrate. Tetanus toxin cleaves the protein VAMP (vesicle-associated membrane protein) at an identical site to that of botulinum toxin type B (BoNT/B). The specificities of the endopeptidase activities of the two toxins however differ in the minimum peptide substrate size required for cleavage. While BoNT/B requires peptide substrates of 30-35 residues in length for optimal cleavage, the requirement for tetanus toxin is peptide substrates of 50 residues in length. The present sequence, VAMP isoform-1 residues 33-94, is a suitable substrate for tetanus toxin

```
or human polynucleotides or a polynucleotide which represents a fragment, comparising the vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence that increases or decreases the expression of the polynucleotide to pain and a compound that regulated in an animal subjected to pain and a compound that regulates the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound which regulates the activity in an animal of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating compound that regulates the compound useful in treating activity in an animal of one or more of the polynucleotides or their antibodies. The polynucleotide compound that composition comprising the one or more of the polynucleotides or their antibodies. The polynucleotide or the compound that protein (e.g. spinal segmental nerve injury (Chung), chronic constriction composition (e.g. spinal segmental perve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed composition of the printed and composition is patent and in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at

cor numan polymucieotides or a polymucieotide which represents a fragment, corrective or allelic variation of the nucleic acid sequence. Also comprising the vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying an agent the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the convertible of the polymucleotide square in the specification, a method for identifying a compound useful in treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction comprising the one or more convertibles its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction the sequence data for this patent did not form part of the printed specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed of from the pain and a patent for sequence form directly from WiPo at the printed and convergences.

                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses a composition comprising two or more isolated rat CC or human polymuclectides or a polymuclectide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polymuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymuclectide sequence CC that is differentially expressed in neuronal tissue of a first animal CC the expression of a polymuclectide sequence which is differentially expressed in neuronal tissue of a first animal CC expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in a method for producing a compound which regulates the polymuclectide sequence which is differentially composition, a method for identifying a pharmaceutical composition, a compound that regulates the activity of one or more of the polymuclectides given in the cc polymuclectides, a method for producing a pharmaceutical composition, a compound that regulates the activity of a pharmaceutical composition, a compound useful in treating palymuclectides or their antibodies. The polymuclectide or the compound that conspiring a compound useful in treating composition and a pharmaceutical composition comprising the one or more polympetides or their antibodies. The polymuclectide or the compound that constriction and a pharmaceutical composition on the composition or treating composition and a pharmaceutical composition of the polympetides or their antibodies. The polymuclectide or the compound that constriction and the constriction of the printed constriction in the part of the printed constriction, but was obtained in electronic form directly from WIPO at the sequence attacks of the part of the printed constriction in the printed constriction att
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a fer of identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc polynucleotides, a method for producing a pharmaceutical composition, a specification, a method for identifying a compound that regulates the cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound useful in treating compound in an animal segmental nerve injury (Cnung), chronic constriction composition that modulates its activity is useful for preparing a medicament for treating pain. Which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition, but was obtained in electronic form directly from WIPO at frauting inthe pain with the pain and pain 
                                                                                                                                                                                                                   RESULT 12
                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a cc kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc subjected to pain, a method for identifying a agent ce expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound which is differentially compound that regulates the activity of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition or more composition and a pharmaceutical composition comprising the one or more compained that regulates the sequence or their antibodies. The polypucleotide or the compound that composition or more injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the specification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, cc derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence that expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynucleotides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition composition to the polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the sequence data for this patent did not form part of the printed constriction which is differentially expressed during pain. Note:

The specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed constriction at the published not semiences.

                                                                                       The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleic acid sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying a nucleotide sequence that is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying an agent CC the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc polynucleotides, a method for more of the polypeptides given in the specification, a method for identifying a compound useful in treating compound useful in treating compound useful in treating compound that path and apharmaceutical composition comprising the one or more compound useful in treating compound that segmental nerve injury (Chung), chronic constriction constriction constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene construction which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed construction of the prin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; Page; 1017pp; English

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       score:

A higher level expression is seen in the brain as compared to the spinal of expression is seen to the synaptobrevin family.
-!- SIMILARITY: Contains 1 v-SNARE coiled-coil homology domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "High resolution structure, stability, and synaptotagmin binding truncated neuronal SNARE complex.";
